## 9.11 Generating dorsal-ventral polarity in *Drosophila* (Part 2)

- 1 Oocyte nucleus travels to anterior dorsal side of oocyte where it localizes *gurken* mRNA.
- 2 *gurken* messages are translated. Gurken is received by Torpedo proteins during mid-oogenesis.
- 3a Torpedo signal causes follicle cells to differentiate to a dorsal morphology.
- 3b Synthesis of Pipe is inhibited in dorsal follicle cells.
- 4 Gurken does not diffuse to ventral side.
- 5 Ventral follicle cells synthesize Pipe.
- 6 In ventral follicle cells, Pipe completes the modification of an unknown factor (x).
- 7 Nudel and factor (x) interact to split the Gastrulation-deficient (Gd) protein.
- 8 Activated Gd splits the Snake protein, and activated Snake cleaves the Easter protein.
- 9 Activated Easter splits Spätzle; activated Spätzle binds to Toll receptor protein.
- 10 Toll activation activates Tube and Pelle, which phosphorylate the Cactus protein. Cactus is degraded, releasing it from Dorsal.
- 11 Dorsal protein enters the nucleus and ventralizes the cell.

9.13 Translocation of Dorsal protein into ventral, but not lateral or dorsal, nuclei (Part 1)

9.16 Dorsal-ventral patterning in *Drosophila*

9.13 Translocation of Dorsal protein into ventral, but not lateral or dorsal, nuclei (Part 2)

**TABLE 9.1** Maternal effect genes that effect the anterior–posterior polarity of the *Drosophila* embryo (Part I)

Gene	Mutant phenotype	Proposed function and structure
<b>ANTERIOR GROUP</b>		
<i>bicoid</i> ( <i>bcd</i> )	Head and thorax deleted, replaced by inverted telson	Graded anterior morphogen; contains homeodomain; represses <i>caudal</i> mRNA
<i>exuperantia</i> ( <i>exu</i> )	Anterior head structures deleted	Anchors <i>bicoid</i> mRNA
<i>swallow</i> ( <i>swa</i> )	Anterior head structures deleted	Anchors <i>bicoid</i> mRNA
<b>POSTERIOR GROUP</b>		
<i>nanos</i> ( <i>nos</i> )	No abdomen	Posterior morphogen; represses <i>hunchback</i> mRNA
<i>tudor</i> ( <i>tud</i> )	No abdomen, no pole cells	Localization of Nanos protein
<i>oskar</i> ( <i>osk</i> )	No abdomen, no pole cells	Localization of Nanos protein
<i>vasa</i> ( <i>vas</i> )	No abdomen, no pole cells; oogenesis defective	Localization of Nanos protein
<i>valois</i> ( <i>val</i> )	No abdomen, no pole cells; cellularization defective	Stabilization of the Nanos localization complex
<i>pumilio</i> ( <i>pum</i> )	No abdomen	Helps Nanos protein bind <i>hunchback</i> message
<i>caudal</i> ( <i>cad</i> )	No abdomen	Activates posterior terminal genes

**TABLE 9.1** Maternal effect genes that effect the anterior–posterior polarity of the *Drosophila* embryo (Part 2)

Gene	Mutant phenotype	Proposed function and structure
TERMINAL GROUP		
<i>torso (tor)</i>	No termini	Possible morphogen for termini
<i>trunk (trk)</i>	No termini	Transmits Torso-like signal to Torso
<i>fs(1)Nasrat[fs(1)N]</i>	No termini; collapsed eggs	Transmits Torso-like signal to Torso
<i>fs(1)polehole[fs(1)ph]</i>	No termini; collapsed eggs	Transmits Torso-like signal to Torso

Source: After Anderson 1989.

**TABLE 9.2** Major genes affecting segmentation pattern in *Drosophila*

Category	Gene name	
Gap genes	<i>Krüppel</i> ( <i>Kr</i> ) <i>knirps</i> ( <i>kni</i> ) <i>hunchback</i> ( <i>hb</i> ) <i>giant</i> ( <i>gt</i> ) <i>tailless</i> ( <i>tll</i> )	<i>huckebein</i> ( <i>hkb</i> ) <i>buttonhead</i> ( <i>btd</i> ) <i>empty spiracles</i> ( <i>ems</i> ) <i>orthodenticle</i> ( <i>otd</i> )
Pair-rule genes (primary)	<i>hairy</i> ( <i>h</i> ) <i>even-skipped</i> ( <i>eve</i> ) <i>runt</i> ( <i>run</i> )	
Pair-rule genes (secondary)	<i>fushi tarazu</i> ( <i>ftz</i> ) <i>odd-paired</i> ( <i>opa</i> ) <i>odd-skipped</i> ( <i>odd</i> )	<i>sloppy-paired</i> ( <i>slp</i> ) <i>paired</i> ( <i>prd</i> )
Segment polarity genes	<i>engrailed</i> ( <i>en</i> ) <i>wingless</i> ( <i>wg</i> ) <i>cubitus interruptusD</i> ( <i>ciD</i> ) <i>hedgehog</i> ( <i>hh</i> ) <i>fused</i> ( <i>fu</i> )	<i>armadillo</i> ( <i>arm</i> ) <i>patched</i> ( <i>ptc</i> ) <i>gooseberry</i> ( <i>gsb</i> ) <i>pangolin</i> ( <i>pan</i> )
